LDEQ ANSWERS TO PROPOSERS QUESTIONS
SFS No. 3901-11-08
“Leaking Underground Storage Tank (LUST) Post-Hurricane Corrective
Action at Discount Zone”

LDEQ’s answers to the following questions are intended to provide information to potential bidders’ questions to SFS No. 3901-11-08.

Questions and answers that may potentially result in the disclosure of information from proposals of competing bidders will not be published.

Question 1: Is it correct to assume only 4 wells will be monitored and sampled quarterly?

LDEQ’s answer: No, it is not correct to assume only 4 wells will be monitored and sampled quarterly. The wells were left in place if further monitoring and sampling is required for groundwater because of measurable free product which was discovered in MW5 during additional site investigation activities conducted on October 27th, 2010 and additional sampling on November 3rd, 2010. Should there still be evidence of free product, the selected contractor will have to determine the remedial method necessary, if not, then the wells must be plugged and abandoned according to LDEQ and LADOTD guidelines.

Question 2: Are all perimeter monitoring wells in place? If so, please identify.

LDEQ’s answer: Wells which were installed during the additional site investigation on October 27th, 2010 were left in place due to the presence of measurable free product in MW5 during additional site investigation activities conducted in October and November 2010. All wells installed prior to that date were plugged and abandoned according to LDEQ and LADOTD guidelines. Wells labeled **MW2, MW4, MW5 and MW8** are the wells which were left in place.

Question 3: SFS refers to “Table 2 Limiting RECAP Standards”(see Attachment B); however the table is not included with the SFS. Is “Table 1 Limiting recap Standards” (Attachment B) the same the Table 2 referred in Attachment B?

LDEQ’s answer: Yes, the SFS should have read “**Table 1 Limiting RECAP Standards**” in Attachment B.
